

Insolvent

How to Reorient Computing for Just Sustainability

Christoph Becker

How we can enact meaningful change in computing to meet the urgent need for sustainability and justice.

The deep entanglement of information technology with our societies has raised hope for a transition to more sustainable and just communities—those that phase out fossil fuels, distribute public goods fairly, allow free access to information, and waste less. In principle, computing should be able to help. But in practice, we live in a world in which opaque algorithms steer us toward misinformation and unsustainable consumerism. *Insolvent* shows why computing's dominant frame of thinking is conceptually insufficient to address our current challenges, and why computing continues to incur societal debts it cannot pay back. Christoph Becker shows how we can reorient design perspectives in computer science to better align with the values of sustainability and justice.

Becker positions the role of information technology and computing in environmental sustainability, social justice, and the intersection of the two, and explains why designing IT for just sustainability is both technically and ethically challenging. Becker goes on to argue that computing could be aided by critical friends—disciplines that draw on critical social theory, feminist thought, and systems thinking—to make better sense of its role in society. Finally, Becker demonstrates that it is possible to fuse critical perspectives with work in computer science, showing new and fruitful directions for computing professionals and researchers to pursue.

Christoph Becker is Associate Professor of Information, Director of the Digital Curation Institute, and a member of the School of the Environment at the University of Toronto. He is also cofounder of the Karlskrona Initiative for Sustainability Design.

“Becker provides rich ideas for reframing computing as an expression of the current political economy rather than a neutral set of tools.”

—**Bonnie Nardi, coauthor of *Heteromation, and Other Stories of Computing and Capitalism***

“Offering an alternative perspective to the intellectual practices shaping computing, *Insolvent* marks a watershed in the growing literature on the world created by computer technology.”

—**Andrew Feenberg, author of *The Ruthless Critique of Everything Existing***

“In a forceful and epically transdisciplinary critique, Becker deconstructs the rationalist, objectivist myths that undergird computing culture, demonstrating how they stand in the way of progress, sustainability, and justice.”

—**Amy J. Ko, Professor, University of Washington**
